

# Case Study:

## ASL selected for assembling iPad charging units

ASL has been selected by PARAT UK to manufacture Apples iPad's charging and sync docking stations. The unit holds 16 iPads and via a USB connection allows the user to easily and quickly charge and synchronise all 16 iPads simultaneously with a PC or Laptop. These charging units are used by Schools, Colleges, Universities and Training Groups.

The whole unit is assembled by ASL and the project calls upon a wide range of skills; cable assembly, wire harnesses, panel build, testing and project management.

PARAT's Managing Director Bob Atkins said "We selected ASL to undertake our wire looming and assembly after careful analysis of the options available to us. After working with them now for about 12 months we conclude that we made the right decision. They provide us with a first class service, quality work, valuable design advice and competitive pricing, and as we are shipping internationally to major clients we value highly all of these elements"
