

Case Study: Heathrow Airport Baggage Control

ASL delivers 550 Control Panels to Heathrow Terminal 5

Assembly Solutions has now completed over 550 control panels for Schneider, the main control system provider to Heathrow Airport. The PLC control panels control and monitor each section of baggage conveyor systems throughout Terminal 5 via a central computer control room.

The project involved a team of 5 ASL staff over an 18 month period at ASL's Bolton factory. A high importance was placed on the use of low smoke materials in case of a fire, and the need for exceptionally high reliability in this demanding application.

Schneider Project Manager Andy Parker-Bates said "We had used ASL for other automotive panels so we knew they could handle medium volume projects to a high standard. We worked closely with ASL production engineers and were very pleased that no panels were late or rejected."
