

Case Study: United Utilities Electricity Services

ASL wins £220k Control Panel contract from UUES

Assembly Solutions was recently selected by UUES to manufacture 338 telemetry control panels to be installed in its main electrical substations throughout the North West. The new equipment enables UUES staff to monitor and control the operation of the remote substations from their Manchester headquarters.

The project involved a team of 10 staff at ASL's Bolton factory over a 4 month period. A substantial investment was made in production engineering and documentation to ensure all units were made identical and efficiently and finally each unit was subjected to a rigorous visual and electrical test.

UUES Project Manager Richard Flame said 'We selected ASL partly because they offered the most competitive quotation but also because they seemed very keen and flexible. ASL have now completed the delivery of the final panels on time, within budget and with no quality problems. I would have no hesitation to recommend ASL to other companies requiring similar projects.'
